

Compelling Evidence of Australian Desexing Initiatives with Community Cats & Rescuers

1. The initial **Parramatta** program (**Keeping Cats Safe at Home** program funded by the New South Wales (NSW) Department of Environment coordinated by the Royal Society for the Protection of Animals (RSPCA) NSW) [R1] included: an allocation of \$90K; an aim “to locate unowned cat hotspots and engage with overwhelmed cat carers and volunteer cat rescue groups”; and results where **cat-related nuisance complaints decreased by 49% and cats arriving at the council pound decreased by 41%.**

The **StrayCare** program [R2] outcomes include: “after just 1 year, we've seen a **33% decrease in pound intake, and after 2 years, an incredible 73% reduction!** Alongside this, **cat euthanasia rates have also dropped dramatically—with a staggering 92% decrease in year 1 and an amazing 98% in year 2.** Last year, only 3 cats were euthanised compared to 145 in 2018-19”.

The RSPCA is interested in operating more of these programs, as are the Cat Protection Society (CPS) NSW, and the Australian Pet Welfare Foundation (APWF) as was expressed at the NSW managing cat populations inquiry hearings 16th December 2024. [R3]

2. The CPS strongly supports desexing programs and their own initiatives include Adopt-A-Stray, and the **CPS Diva** programs with many Sydney councils. The CPS has assisted **1,800 cats** under NSW grants, which has been **estimated to avoid the birth of 16,200 kittens in 240 days**, (around 8 calendar months). [R4]
3. The **APWF Community Cat Programs** with extensive research over several years and by April 2024 **desexed 2,750 cats**, “80% were considered owned, 11% were considered semi-owned but became owned by the carer when desexed... 7% remained semi-owned” and including benefits of “**greater than 30% reduction in cat intake & 50% less euthanasia in target areas**” [R5].
4. Several **Council Desexing programs & initiatives**

The **Banyule council in Victoria** operated their own self-funded desexing program over several years, where the investment was returned 4 times in terms of savings. For owned and semi-owned cats this included “**decreases in impoundments by 66%, euthanasia by 82%, and cat-related calls by 36% over 8 years, with savings to council of AU \$440,660 for an outlay of AU \$77,490**”. [R6] Banyule council self-funded.

The **Rosewood council NSW** operated a pilot APWF community cat program and achieved successful outcomes with **308 cats sterilized**, including in its third year “**cat intake had decreased by 60%, numbers euthanized by 85%, and there were 39% fewer cat-related calls to council**”. [R7]

The **Weddin Council NSW KCSAH** project invested all funds to a **desexing program under local vets** [R1], including microchipping and collaboratively working to achieved **rapid results for over 100 cats**. This was considered to represent “the future of local cat

Compelling Evidence of Australian Desexing Initiatives with Community Cats & Rescuers

management, it is the answer to reducing cat euthanasia rates and keeping cats out of pounds and shelters". [R8]

Liverpool council NSW has over several years offered free desexing services. Another program is currently on offer, repeating previous successful efforts. Liverpool council self-funded.

Georges River council NSW has commenced a three-month program in 2025 to provide cat desexing and microchipping services free for residents [R9].

Canterbury Bankstown has commenced a short program with **CPS Diva** commencing April 2025.

Cumberland council NSW has commenced a program offering free desexing in commencing April 2025 with **RSPCA NSW** stray cat initiatives.

5. Vet related desexing initiatives

In 2024, several **Greencross Vet NSW practices**, provided funded desexing services for community cats and their rescuers/carers [R10]. This enabled around **500 cats** to be rapidly desexed reducing the number of new kittens being born in these areas, minimising the number of roaming cats and the potential impact to wildlife.

The impact of 250 breeding pairs of cats, may be **estimated to be several thousand in a single year**, e.g. avoiding 1,000 kittens in <3 months, then by around 12 months another 7,000 from grandparents and two litters becoming parents themselves.

The **Logan City council pound QLD partners with young vets** to achieve high desexing numbers, including "4,700 dogs and cats were impounded... last financial year, 3,945 in Brisbane and more than 2,700 in Ipswich" and their chief vet advises "**desexing is the 'single biggest thing' that will reduce the number of unwanted animals**". [R11]

Providing vet-based services and the benefits, aligns with the **Australian Veterinary Association (AVA)** concerns and recommendations to the NSW government:

- "major gaps; in acknowledging the role of veterinary practices in rehoming processes, in recognising the support that local veterinary practices provide for the community and the negative impacts on the sector by this lack of consideration", and supporting "establishment of a community cat program with ongoing funding arrangements needs to include formal provisions for veterinary practices reimbursement when receiving stray cats", [R10]
- funding desexing initiatives "these programs should be funded by the government to ensure they do not financially strain private veterinary practices". [R13]

Compelling Evidence of Australian Desexing Initiatives with Community Cats & Rescuers

Cost effective urban cat management

New Australian research [R14] on **desexing abandoned cats, reinforces the integrated focus areas for cost effective urban cat management**, including:

- traditional methods of trapping and euthanasing fail to address root causes (i.e. the start of the supply chain with a high number of cats continuing to breed,
- “One Welfare” programs providing support for cat sterilisation etc, provide better outcomes for cats and owners/ care givers/ rescuers, vet and pound staff, minimise the populations and reduce the impacts to wildlife,
- a number of Victorian councils acknowledge that mandatory confinement is not enforceable and comes with high ongoing costs and have abandoned this approach,
- enforcement approaches disproportionately burden vulnerable communities, strain government resources, and include mental health impacts to council and shelter staff and rescue volunteers,
- TNR programs in urban areas have been reducing cat populations by 30% within two years, and reduce the mental health impacts to rescuers and staff, of euthanasing healthy but fearful cats (especially those abandoned recently by irresponsible owners).

Ongoing impacts to community cats and rescuers, if proactive humane steps are not taken

There has been **an unreasonable and unfair financial burden on volunteer community cat rescuers and, in our opinion, a blatant form of emotional abuse / blackmail** where those who care about cats who are carrying the load for cat welfare in their communities.

Desexing programs involving community cats and their rescuers/ carers start to rectify this unfair burden.[R15]

It is strongly recommended that the research [R16] into the Australian Newcastle breakwater cats culling is taken into consideration including:

- the **extremely strong bond between volunteer carers and rescuers with colony cats** “known by authorities for at least five years, and included using a TNR program to reduce numbers from 100 to about 40” with rehoming many cats abandoned by others,
- the advice “...the severity of the adverse psychological impacts, and the morbidity rate amongst the cat caregivers... was far greater than would be expected as a risk to the community if the cats had remained at the site. We therefore suggest that **potential legal ramifications should be considered before authorities intentionally choose a method of management that is likely to inflict substantial harm on community members.**”
